

Thank you for purchasing your Moverio BT-300.

MOVERIO
A new way of seeing the world

Here are 7 simple steps to get started with your DJI drone.

-  Turn the BT-300 on and connect to a Wi-Fi network.
-  Make sure the BT-300 has the latest firmware installed.
(Apps > Settings > About device > System updates)
-  Create a Moverio Apps Market account via the pre-installed app or using a PC on our website.
(https://moverio.epson.com/jsp/pc/pc_login.jsp)
-  Download and install the DJI GO or DJI GO 4 apps from the Moverio Apps Market.
-  Turn on your DJI drone and DJI controller. Remove any cables connected to your DJI controller and connect the BT-300 handset to your DJI controller using the micro USB cable provided.
-  Open the DJI GO or DJI GO 4 app (if prompted, select 'Just Once') and select 'Go Fly'.
-  You are now ready to fly!

Note: The DJI GO and DJI GO 4 apps support different drone models. Please check compatibility before downloading.

Piloting tips

The brightness settings can be changed using the switch key on the left side of your BT-300 controller. Adaptive brightness can also be selected in the Settings menu (Apps > Settings > Display > Adaptive brightness).

The BT-300 display can be muted by pressing the power button once quickly, press it again to unmute. Tap to mute also allows you to mute the BT-300 display by tapping the right side of the glasses twice. To enable this feature go to Apps > Settings > Language & Input > Tap to mute.
